<u>Roberts ConnectR replaced by UNDOK™</u>

At Roberts, we are committed to delivering you the highest level of customer service and support. To that end, our teams are continuously working hard on improving our products, their respective features and their overall ease of use.

With over 80 years of experience, we pride ourselves at being at the forefront of new audio technology. We launched our first Internet Radio in 2007 and our award-winning Stream 93i with Spotify Connect and DLNA connectivity in 2014.
Continuing this tradition, we recently announced our new R-Line range which will see us further expand our offering of connected audio products.

Over the last five years, many of you have been using the ConnectR app on your iOS and Android devices to get the most out of our Internet Radios.
Moving forward, in order that we deliver a consistent experience across both our Internet Radio products and upcoming R-Line range, we are pleased to announce that, in conjunction with our technology partners at Frontier Silicon, UNDOK™ is the recommended companion app for your Roberts Internet Radio[1].

Simply download and install the free UNDOK™ app to your iOS[2] or Android[3] device, connect to the same network as your Roberts Internet Radio, and enjoy a wealth of features. UNDOK™ not only allows you to easily control playback of your audio, you are also able to select from over 20,000 Internet Radio stations and podcasts, and browse music stored locally on your DLNA compatible music libraries – all from within one easy-to-use app.

UNDOK™ is compatible with Spotify Connect[4], so you can play your favourite music directly from your Spotify app to your compatible Roberts Internet Radio[5].

NOTE: In order that we deliver the same user-experience to all of our customers, the Roberts ConnectR app will be removed from both the Apple App Store and Google Play at a later date. Whilst you can still use this app on your devices, it will no longer be updated as a result. For the best experience please ensure that you download the UNDOK™ app to your applicable devices.

[1]:   The following Roberts Internet Radio models* are not supported by UNDOK™:
